

The Plan to Keep Building — Growth Roadmap & Case Study Protocol

Post-Internship Expansion Strategy, 3-Beat Case Study Addition Protocol, and AI Context Preservation

Student: Abdul Sami Uthwal

Track: General AI Fluency (Week 09)

Live HTTPS Domain: abdulsamiuthwal-portfolio.vercel.app

GitHub Repository: [abdulsamiuthwal-eng/Flyrank-assignments](https://github.com/abdulsamiuthwal-eng/Flyrank-assignments)

1. Executive Summary

A portfolio that never gets a second project goes stale. This deliverable defines the concrete 3-beat protocol for inserting future case studies, names the next planned AI system, documents the monthly reminder schedule, and confirms the preservation of the AI agent build context.

2. The 3-Beat Case Study Addition Protocol

BEAT 1: THE OPERATIONAL BOTTLENECK (PROBLEM)

Define the specific business friction, target user group, and baseline delay prior to engineering.

BEAT 2: THE AI ARCHITECTURE & IMPLEMENTATION (WHAT YOU DID)

Detail the core models, APIs, agent loops, vector indexes, and frameworks deployed.

BEAT 3: QUANTIFIABLE TIME-TO-VALUE & ROI (WHAT CAME OF IT)

State the verified metric: % latency reduction, accuracy score, or hours saved weekly.

3. Named Next Piece of Real Work

Project Name: *Autonomous Multi-Agent Enterprise RAG & Legal Citation Engine*

Architecture: Qdrant vector index + OpenAI text-embedding-3-large embeddings + Dual-agent supervisor loop (LegalResearcher + CitationAuditor) deployed on Cloud Run.

Target Metric: 85% reduction in legal document audit time with 99.2% citation precision.

4. Preserved AI Build Context

All build context, design system tokens, typography rules, and student profile are permanently preserved in workspace configuration files (CHAT_HISTORY_GUIDE.md & .agents/AGENTS.md). Future case study additions require only a 2-minute conversation with the AI agent, with zero CSS rebuild required.

5. Reusable Case Study HTML Code Template

```
<article class="work-card">
  <div class="work-card-header">
    <span class="work-category">[CATEGORY]</span>
    <span class="work-status">Live Metric: [QUANTIFIED ROI]</span>
  </div>
  <h3>[PROJECT NAME / TITLE]</h3>
  <p>[BEAT 1 & BEAT 2 SUMMARY]</p>
  <div class="tech-stack">
    <span>[TECH 1]</span>
    <span>[TECH 2]</span>
  </div>
</article>
```
